The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply						
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.  - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.  - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.  - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.  - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).						
Status						
1)⊠ Responsive to communication(s) filed on <i>02 Ju</i>	ne 2004

#### **DETAILED ACTION**

### Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 5/3/04 has been entered.

## Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-6 are rejected under 35 U.S.C. 112, second paragraph, as failing to set forth the subject matter which applicant(s) regard as their invention. Claims 1-5 are drawn to an automatic synthesis machine, but only the display device and a selection control device are recited in the claims. Applicants must set forth the structure of the synthesis machine, i.e. reaction vessels, etc., and how they inter-relate structurally and/or functionally with the display and control devices.

Claim 6 recites reaction vessels, a selection means and an analysis means, then refers back to "said display device." No such display device has been recited.

# Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 1743

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-7 are rejected under 35 U.S.C. 102(e) as being anticipated by Inoue, U.S. patent 6,740,296.

The applied reference has a common assignee with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

Inoue teaches an automated chemical synthesizer similar to that claimed in this application. The synthesizer includes parallel reaction vessels, a display device for displaying certain information about the synthesizer and a selection means for selecting one or more of the parallel reaction vessels displayed on the display device. Inoue teaches that synthesizing protocols are stored in a memory device and retrieved for display and selection for the operator (see column 5-6, lines 65, et seq.) The reagent types and amounts are also stored in memory and displayed on the screen when needed (column 6, lines 42-50). The synthesizer of Inoue also allows an operator to create synthesis protocols which are stored in memory for later retrieval and execution.

Art Unit: 1743

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wang et al. (USP 6,489,168 B1).

Wang et al. teach an analysis and control system comprising a monitor 150 for displaying vessels 210 housed in a reaction block 110 and a selection means 600, 680

Art Unit: 1743

for selecting one or more vessels displayed on the screen based on data provided by the user 170/150 or storage means 180, such that the selector can modify the operation parameters (e.g. temperature, pH, etc.) related to the selected vessels (column 12, lines 46-52, Figs. 6a-6b). Moreover, Wang et al. teach a protocol creation means 700 for creating a protocol based on data supplied from the selector and displaying the vessels together with operation contents of the vessels (Figs. 7a-8, claim 3). Additionally, Wang et al. teach an analysis means 145 or protocol line analysis means for picking out the operation contents supplied by the user/storage and creating the operational procedure related to the selected vessel (Figs. 1,3).

Wang, et al. do not specifically teach that the display device displays protocols including reagent type and operation type.

Wang, et al. does, however, teach that the display device displays measured as well as calculated parameters related to the individual reaction vessels. In column 6, line 29, et seq. teach:

"Data analysis module performs appropriate calculations on the sampled data . . . Reactor control system 100 can also determine whether the reaction occurring in one or more of reactor vessels 210 has reached a specified conversion target based on results calculated in step 360; in that case, reactor control system 100 causes the addition of a quenching agent to the relevant reactor vessel or vessels as discussed above, terminating the reaction in that vessel."

Control systems are known to provide alarms and indicators of specified conditions. It would have been obvious to one of ordinary skill in the art to display such information as a quenching process for the reaction, as well as the quenching agent employed on the

Art Unit: 1743

Page 6

same display device used to monitor reactor contents in order to provide a single point of information, remote from the actual reactor, for the operator to consult.

### Conclusion

Any inquiry concerning this communication should be directed to Jill A. Warden at telephone number (571) 272-1267.
